

Wahidullah Hoji Aminullah

403-408-7479 | wahidullah.hojiaminu@ucalgary.ca | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

- Hands-on experience in **full-stack development**, **machine learning**, and **API integration**, with a focus on delivering practical solutions.
- Experience in utilizing **FastAPI**, **Django**, **Express.js**, **MySQL**, **SQLite**, **PostgreSQL** for back-end development.
- Proficient in frameworks like **React** and **Node.js** for creating dynamic, user-friendly applications.
- Skilled in using **PyTorch** and **TensorFlow** to develop and optimize machine learning models.
- Expertise in turning complex business **requirements** into efficient technical solutions.
- Experience includes developing **compliance systems**, fine-tuning **AI models** for enhanced performance, and collaborating with **cross-functional teams** to deliver high-quality projects.
- Excellent communication skills in English, Farsi, and Uzbek.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, R
Frameworks: React, PyTorch, Keras, JUnit, REST API, FastAPI, Django
Developer Tools: AWS, Git, Node.js, Docker, Visual Studio, Figma
Data Analysis Tools: Apache Spark, Pandas, Numpy, Tableau
AI/ML: Hugging Face Transformers, TensorFlow, LangChain

EDUCATION

University of Calgary Calgary, AB
Bachelor of Science in Software Engineering (GPA – 3.23) *Sep. 2020 – May 2025*

EXPERIENCE

Software Engineer / AI Developer Intern July 2024 – September 2024
PKF Antares *Calgary, AB*

- **Engineered** AML compliance solutions by researching and integrating APIs for sanctioned individuals, enhancing regulatory robustness of financial applications.
- **Developed** and **integrated** sanctions.io API into financial applications, reducing data retrieval time by 9% and increasing real-time identification accuracy of sanctioned entities by 14%.
- **Executed** rigorous API testing procedures, ensuring seamless integration, high performance, and accuracy in compliance-related functionalities.
- **Researched** advanced Large Language Models (LLMs) and assessed state-of-the-art models to identify best-fit solutions for an AI-driven application.
- **Fine-tuned** a selected LLM using a specialized dataset, improving model accuracy by 11% and reducing inference time by 7%, leading to more relevant outputs.

PROJECTS

SwiftNotesAI (Engineering Capstone) | *Python, FastAPI, PyTorch, LaTeX, React, PostgreSQL* Sep 2024 – Apr 2025

- **Trained** a custom sequence-to-sequence model that converts academic PDF documents into well-structured $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ notes with automatic sectioning, math formatting, and citation placeholders.
- **Generated** spaced-repetition **flashcards** by automatically extracting key terms and definitions, increasing recall for pilot users by ~32%.
- **Implemented** a “Chat with your PDF” feature using retrieval-augmented generation, enabling students to ask questions in natural language and receive paragraph-level answers with page references.
- **Built** an **AI Scheduler** that integrates with Google Calendar to suggest optimal study blocks based on urgency and predicted knowledge-decay curves.

- Achieved an 87% ROUGE-L match between model output and manually curated notes, cutting note-taking time by 70% in user studies ($n=15$).

AllSkii | *JavaScript, React, Firebase, Node.js, Axios, Git*

Jan 2024 – Apr 2024

- **Developed** and **integrated** core features (signup, login, home, and profile pages) for the AllSkii Web Application using React and Node.js.
- **Implemented** secure authentication flows, enhancing user trust across signup, signin, home, and profile pages.
- Designed an intuitive front-end interface with Figma prototypes, focusing on streamlined navigation and aesthetics.

BreakTime | *MongoDB, JavaScript, React, REST API, PyTorch, Git*

Sep 2023 – Dec 2023

- Developed the front-end with React and the back-end with Node.js and MongoDB, crafting an intuitive user interface with dynamic components.
- Led the creation of UML and state transition diagrams to clarify system design and enhance team communication.
- Designed comprehensive test cases to ensure the accuracy of content-based recommendation algorithms and overall system reliability.

Schedule Generator | *Java, Swing, SQL (Postgres), Git*

Jan 2023 – Apr 2023

- Analyzed database requirements to organize animal care schedules, staff availability, and resource allocation, optimizing data retrieval and schedule modification.
- Automated task allocation by considering staff qualifications and resource availability, enhancing operational efficiency.
- Created detailed test cases for schedule and resource conflicts, reducing critical defects and improving software quality.
